

**WE CARE  
WE CONNECT**

## Inside

Our idea of helping the people who  
are suffering from the Covid-19.

Services that helped the needy.

# **A PROJECT REPORT ON WE CARE WE CONNECT**

The Project report submitted to Ravenshaw University on partial fulfillment of the Requirements for the award of the degree of Bsc Information Science and Telecommunication (2018-2021)

**DEPARTMENT OF INFORMATION SCIENCE AND TELECOMMUNICATION  
RAVENSHAW UNIVERSITY  
CUTTACK-753003**

SUBMITTED BY: SONALI SENAPATI (18DIS003)  
ADITYA MISHRA (18DIS009)  
SAGAR KUMAR PAHI (18DIS027)  
SEFALI MISHRA (18DIS033)  
SOUMYA RANJAN SWAIN (18DIS059)  
SATYAJEET MOHANTY (18DIS069)

INSTITUTION NAME : RAVENSHAW UNIVERSITY  
UNDER GUIDANCE OF:

# **CERTIFICATE**

Certified that this is a bonafide record of the project work titled

## **WE CARE WE CONNECT**

**DONE BY:**

**SONALI SENAPATI**

**ADITYA MISHRA**

**SAGAR KUMAR PAHI**

**SEFALI MISHRA**

**SOUMYA RANJAN SWAIN**

**SATYAJEET MOHANTY**

Of 6<sup>th</sup> semester Bsc Ist in the year 2018-21 in  
partial fulfillment of the requirements for the reward of degree of  
Bachelor of Science IST.

**PROJECT GUIDE**

# **ACKNOWLEDGEMENT**

I would like to express my deepest appreciation to all those who provided me the possibility to complete this report. A special gratitude to those whose contribution in stimulating suggestions and encouragement helped me to coordinate my project.

I would like to express my thankfulness to my project guide, Mrs. TANISTHA NAYAK, for her constant motivation and valuable help through the project work.

Last but not the least I would like to mention here that I am greatly indebted to each and everybody who acknowledgement has been associated with my project at any stage but whose name does not find a place in this.

# **PREFACE**

The main objective of any Information science student is to get as much of practical knowledge as possible. Being an able to have a practical knowledge by developing a project is a lifetime experience. As practical knowledge is as important as theoretical knowledge, we are thanked of having a project. Through the development of the project we had a great experience of various strategies that can be applied in development of project. This project is the stepping step for our carrier. We are pleased to present this project. Proper care has been taken while organizing the project so that it is so important also various software engineering concepts have been implemented.

## **ABSTRACT**

**“WE CARE WE CONNECT”** is a non-profitable initiative which provides the every details of food resources, Oxygen supplies and Medicine necessary for Covid patients .Every minute and single details of the availability of the resources is provided .Home assistance of the help would be done 24\*7.The aim is to provide support locally at first and would try out to reach maximum. This system would help to stop public dilemma and confusion, as they will be able to find every detail of their needs in a trusted, functional, well organized website. The interfaces are simple and easy to use which will be helpful to the users.

## 2.

## **INTRODUCTION**

The Covid-19 also known as the coronavirus pandemic, is an ongoing pandemic caused by severe acute respiratory syndrome Coronavirus 2(SARS-CoV-2).The outbreak was first identified in Wuhan,China in the year December 2019.Gradually the disease globalized and until now more than 20 Crore cases has been identified. The mutation of virus has sped up its devastation as the death rate has been gradually rising. Multiple covid waves has peaked its cause which has been more impactful and its toll more unbearable.

Developing and populated country like India has suffered the most. The effect has been drastic and humongous. Demand of Oxygen, Medicine has drastically increased. So, in this time of dire needs, turning outwards is a win in prospect. In helping other people gets through this crisis we are indirectly helping ourselves.

## 2.1 AIMS AND OBJECTIVES

**“WE CARE WE CONNECT”** is a non- profitable initiative designed to help in the fight against this pandemic. Our aims and objectives are:

- To provide every detail of food resources, oxygen supplies & medicines necessary
- Home assistance of the help 24\*7
- Complete details and availability of the resources causing no public dilemmas

## 2.2 BACKGROUND OF PROJECT

The covid 19 pandemic and resulting lockdown or social distancing measures has resulted in a considerable number of changes. Virus mutation and successive waves has made the virus more lethal and communicable. Covid complication and lack of proper resources has caused many deaths. We are determining the support network as a significant.

We have been working on this project to fill the needs of community by providing proper and systematized channel for distributing Food, Oxygen supplies and Medicine.

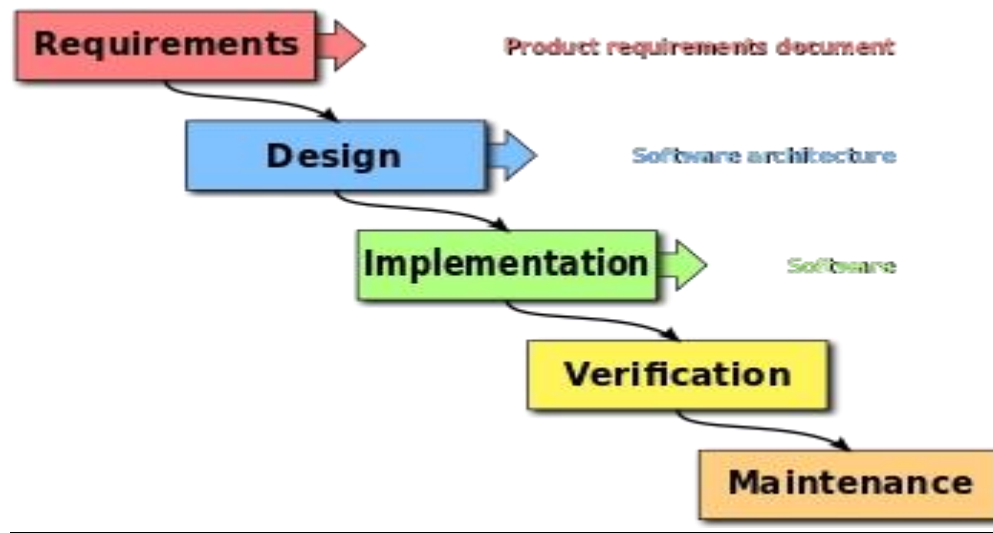

We are implementing this project by explaining the current situation and its problems and trying to find the solution of the problem

## 2.3 OPERATION ENVIRONMENT

<b>PROCESSOR</b>	INTEL CORE PROCESSOR FOR BETTER PERFORMANCE,AMD
<b>OPERATING SYSTEM</b>	WINDOWS7,8,9,10,UBUNTU
<b>MEMORY</b>	1 GB RAM OR MORE
<b>DATABASE</b>	DERBY

3.

## SYSTEM ANALYSIS

System Analysis is a process of Gathering and interpreting facts, diagnosing problems. System analysis will be performed to determine if it is feasible to design information based on policies and plans of the organization and on user requirements and to eliminate the weaknesses of the present system. The functional and non functional requirements are included in SRS part to provide complete description and overview of system requirements before the developing process is carried out.

### **3.1 SOFTWARE REQUIREMENT SPECIFICATION**

GENERAL DESCRIPTION: -

PRODUCT DESCRIPTION

“**WE CARE WE CONNECT**” is a computerized platform which helps to provide food resource, medicine and oxygen supplies to the Covid sufferings .It reduces the extra efforts and time of the people as they can access their need with a single click. Safe and sound delivery of the help is also assured.

#### **PROBLEM STATEMENT**

The problem occurring before is summarized below: -

- No proper bridge between the supplier and the recipient. So the accuracy of the delivery was questionable.
- No proper validation was required before which led to the misuse of the resources.
- Having no updates about the resources caused panic and confusion among the people.

#### **SYSTEM OBJECTIVES**

- Saving time and effort of the people.
- Proper validation with IDs
- Improvement in productivity and service.
- To make the system more reliable, flexible and growth potential

## 3.2 SYSTEM REQUIREMENTS

### NON- FUNCTIONAL REQUIREMENTS

- Product requirements

#### EFFICIENCY REQUIREMENT

When the system is implemented, the user should be able to order his dire need in a quick and easy manner and the delivery should be at right place and right time.

#### RELIABILITY REQUIREMENT

The system should be reliable and no forgery or falsification should happen. With proper validation like phone number and password, the system will be safe and reliable.

#### USABILITY REQUIREMENT

The system design should be user friendly environment, easy interface that makes sense to average user and requires minimum explanation.

### IMPLEMENTATION REQUIREMENTS

In implementing whole system it uses html in front end with java as server side scripting language which will be used for database connectivity and the backend i.e the database part is developed using derby.

### FUNCTIONAL REQUIREMENTS

#### 1. NORMAL USER

##### 1.1 USER LOGIN

Description of feature: This feature is used by the user to login into system. They are required to enter phone number and password before they are allowed to access the services. The phone number and password will be verified and if invalid user is not allowed to access the services.

#### Functional requirements

- The system must allow user with valid phone number and password to access the services.
- The system performs authorization process which decides what user level can access to.
- The user must be able to logout after they finished using system.

## 1.2 REGISTER NEW USER

Description of feature: This feature can be performed by all users to register new user to create account

### Functional requirements

- System must be able to verify instrument
- System must be able to delete information if information is wrong

# **SOFTWARE AND HARDWARE REQUIREMENTS**

This section describes the software and hardware requirements of the system:-

## **DESCRIPTION OF SOFTWARE**

- ∞ Technologies : HTML, CSS, JavaScript, Bootstrap
- ∞ Database : Derby
- ∞ Language : Java
- ∞ Browser : Chrome, Mozilla Firefox
- ∞ Operating System : Window 7, 10
- ∞ Tools : Netbeans Ide 8.0
- ∞ Server : Apache Tomcat

- Database Derby is used as it has a small footprint –about 3.5 megabytes for the base engine and embedded JDBC driver .As the language used is Java it lets to embed in every Java based solution
- Netbeans is used as it a free and open source IDE which enables the development of web applications quickly and easily

## **HARDWARE CONFIGURATION**

This System is developed on the following hardware configurations.

- Processor : Dual core
- RAM : 1 Gb
- Hard disk : 30 GB

### **3.3 SOFTWARE TOOLS USED**

The whole project is divided into two parts :-

1. The Front end
2. The Back end

#### **The Front end**

It refers to the user interface. The front end is designed using HTML, CSS, JavaScript, and Bootstrap.

- **HTML**-It stands for **Hyper Text Markup Language**. It is the main markup language for creating web pages and other information that can be displayed in a web browser. HTML is written in the form of HTML elements consisting of tags enclosed in angle brackets (like `<tag>`), within the web page content. HTML tags most commonly come in pairs like `<tag>...</tag>` although some tags represent empty elements and so are unpaired, for example **Error! Filename not specified..** The first tag in a pair is the start tag, and the second tag is the end tag (they are also called opening tags and closing tags). In between these tags web designers can add text, further tags, comments and other types of text-based content

The purpose of a web browser is to read HTML documents and compose them into visible or audible web pages. The browser does not display the HTML tags, but uses the tags to interpret the content of the page. HTML elements form the building blocks of all websites. HTML allows images and objects to be embedded and can be used to create interactive forms.

It provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes and other items. It can embed scripts written in languages such as JavaScript which affect the behavior of HTML web pages.

- **CSS- Cascading Style Sheets(CSS)** is a style sheet language used for describing the look and formatting of a document written in a markup language. While most often used to style web pages and interfaces written in HTML and XHTML, the language can be applied to any kind of XML document, including plain XML, SVG and XUL. CSS is a cornerstone specification of the web and almost all web pages use CSS style sheets to describe their presentation. CSS is designed primarily to enable the separation of document content from document presentation, including elements such as the layout, colors, and fonts. This separation can improve content accessibility, provide more flexibility and control in the specification. of presentation characteristics, enable multiple pages to share formatting, and reduce complexity and repetition in the structural content (such as by allowing for table less web design).

CSS can also allow the same markup page to be presented in different styles for different rendering methods, such as on-screen, in print, by voice (when read out by a speech-based browser or screen reader) and on Braille-based, tactile devices. It can also be used to allow the web page to display differently depending on the screen size or device on which it is being viewed. While the author of a document typically links that document to a CSS file, readers can use a different style sheet, perhaps one on their own computer, to override the one the author has specified. However if the author or the reader did not link the document to a specific style sheet the default style of the browser will be applied. CSS specifies a priority scheme to determine which style rules apply if more than one rule matches against a particular element. In this so-called cascade, priorities or weights are calculated and assigned to rules, so that the results are predictable.

- **JAVA SCRIPT- JavaScript (JS)** is a dynamic computer programming language. It is most commonly used as part of web browsers, whose implementations allow client side scripts to interact with the user, control the browser, communicate asynchronously, and alter the document content that is displayed. It is also being used in server-side programming, game development and the creation of desktop and mobile applications. JavaScript is a prototype-based scripting language with dynamic typing and has first-class functions. Its syntax was influenced by C. JavaScript copies many names and naming conventions from Java, but the two languages are otherwise unrelated and have very different semantics. The key design principles within JavaScript are taken from the self and Scheme programming languages. It is a multi paradigm language, supporting object-oriented, imperative, and functional programming styles. The application of JavaScript to use outside of web pages—for example, in PDF documents, site-specific browsers, and desktop widgets—is also significant. Newer and faster JavaScript VMs and platforms built upon them (notably Node.js) have also increased the popularity of JavaScript for server-side web applications. On the client side, JavaScript was traditionally implemented as an interpreted language but just-in-time compilation is now performed by recent (post-2012) browsers.
- **Bootstrap:-**Bootstrap is a free and open-source tool collection for creating responsive websites and web applications. It is the most popular HTML, CSS, and JavaScript framework for developing responsive, mobile-first websites. It solves many problems which we had once, one of which is the cross-browser compatibility issue. Nowadays, the websites are perfect for all the browsers (IE, Firefox, and Chrome) and for all sizes of screens (Desktop, Tablets, and Phones). All thanks to Bootstrap developers -Mark Otto and Jacob Thornton of Twitter, though it was later declared to be an open-source project.

## **The Back End**

The back end means the server , application and database that work behind the scenes to deliver the information to the user

**JAVA:-**JAVA was developed by James Gosling at Sun Microsystems\_\_Inc in the year 1991, later acquired by Oracle Corporation. It is a simple programming language. Java makes writing, compiling, and debugging programming easy. It helps to create reusable code and modular programs.

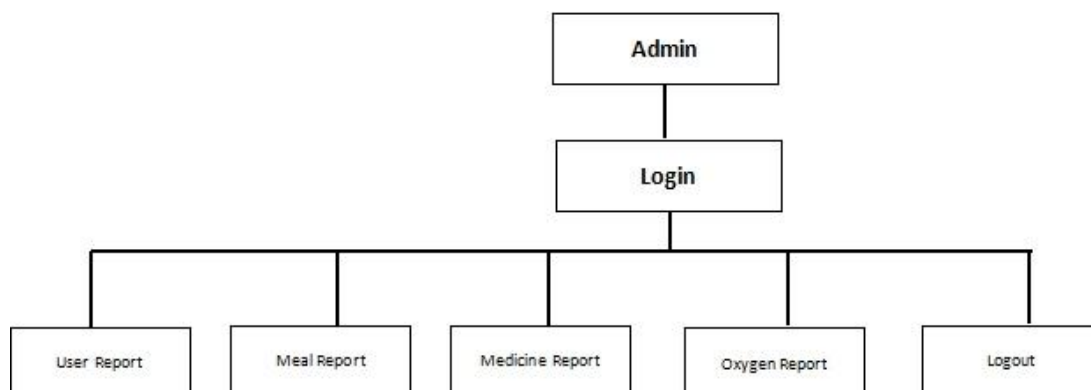

Java is a class-based, object-oriented programming language and is designed to have as few implementation dependencies as possible. A general-purpose programming language made for developers to write once run anywhere that is compiled Java code can run on all platforms that support Java. Java applications are compiled to byte code that can run on any Java Virtual Machine. The syntax of Java is similar to c/c++.

## **4.SYSTEM DESIGN AND IMPLEMENTATIONS**

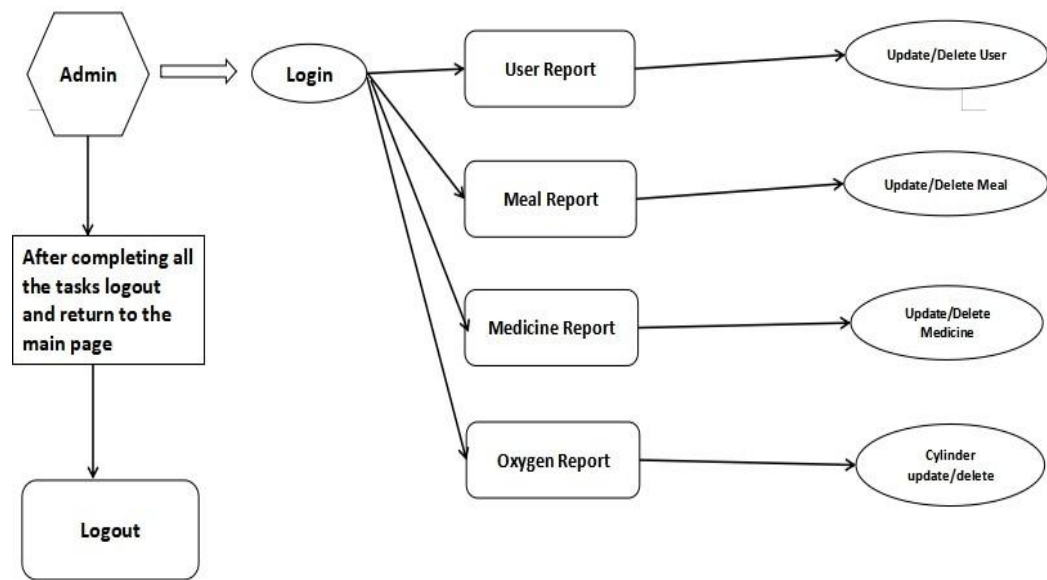

### **4.1 DATA FLOW& ER DIAGRAMS**

Design is the first step in the development phase for any techniques and principles for the purpose of defining a device, a process or system in sufficient detail to permit its physical realization. Once the software requirements have been analyzed and specified the software design involves three technical activities - design, coding, implementation and testing that are required to build and verify the software. The various Diagrams involved are:-

#### **1.USE CASE DIAGRAM OF ADMIN**

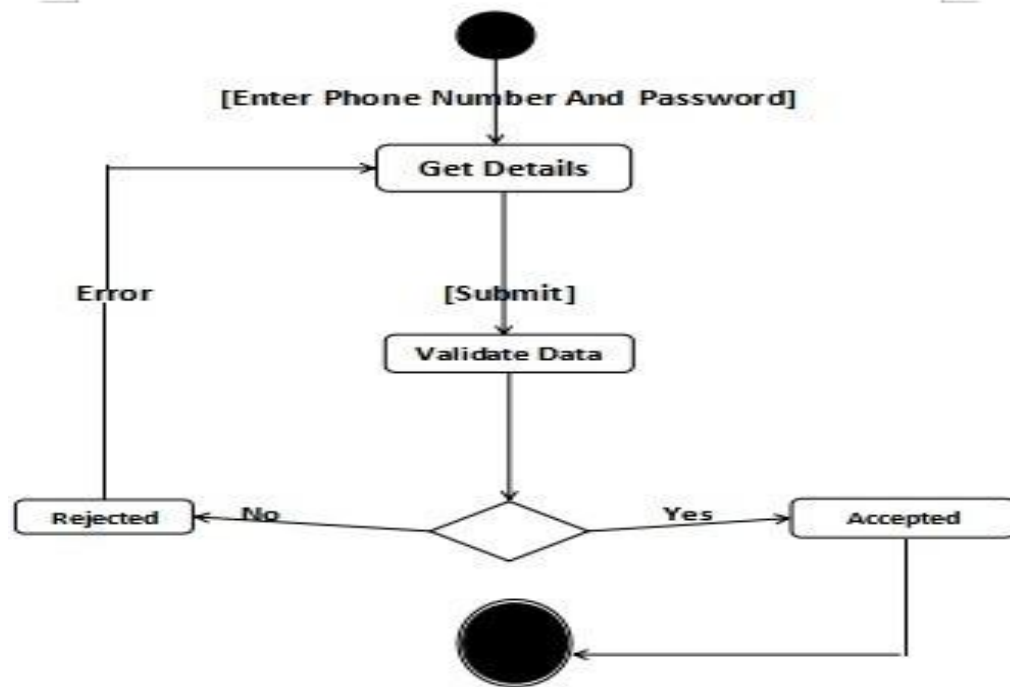

## 2.ADMIN DATA FLOW DIAGRAM

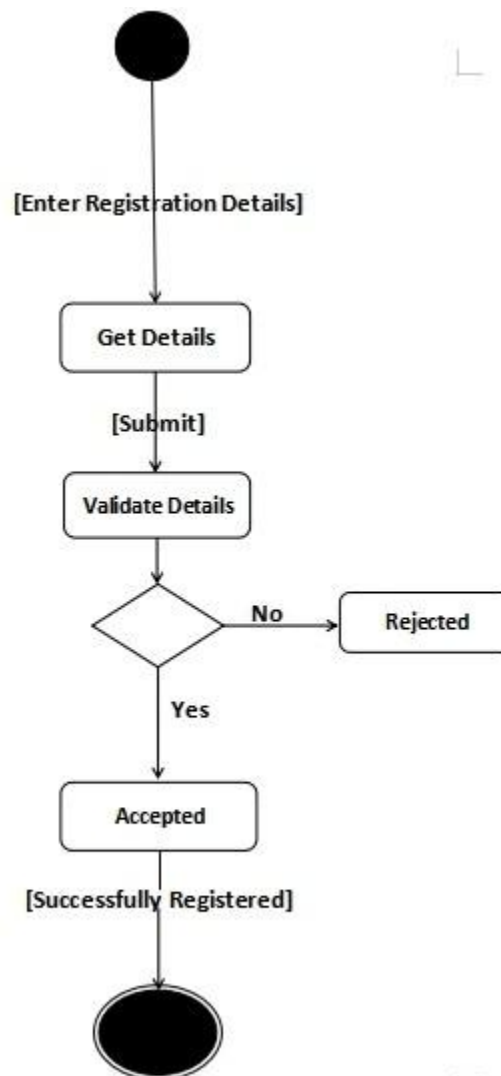

## 3. LOGIN ER DIAGRAM

After entering the home page of the website, the User can chose the LOGIN option where they are asked phone number and password and if he/she is a valid user then they will be logged in and if not then error message is displayed.

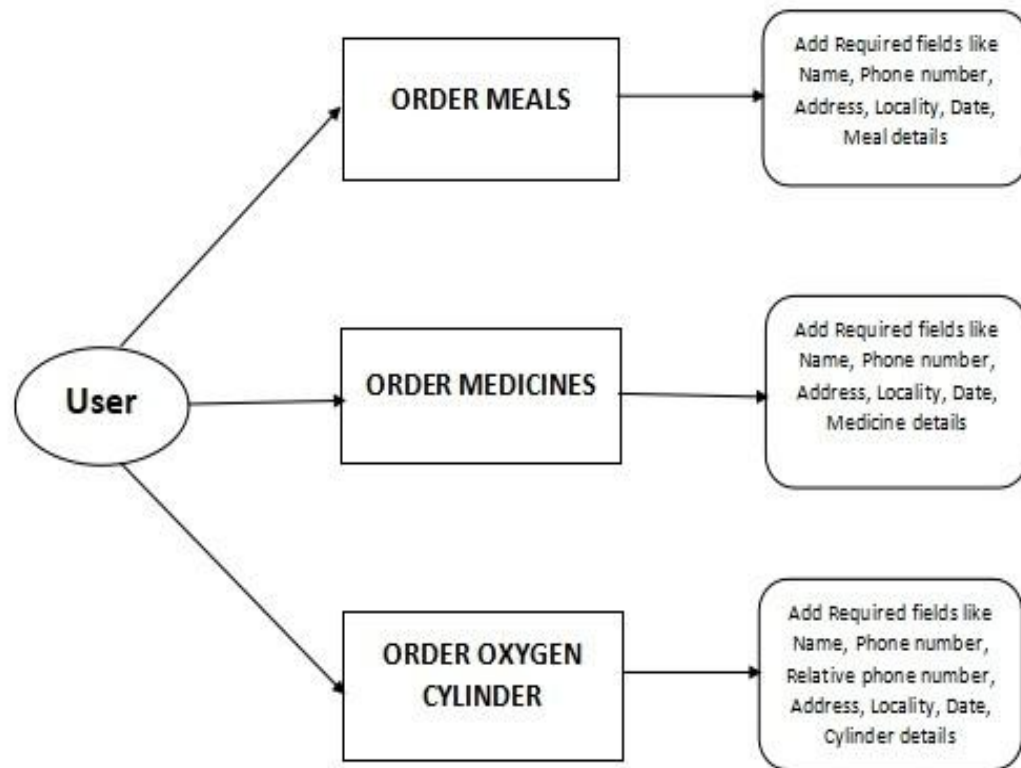

#### 4.REGISTRATION ER DIAGRAM

After entering the registration details, the system validates the information. If accepted the user will successfully register himself and can book the wanted resources with ease.

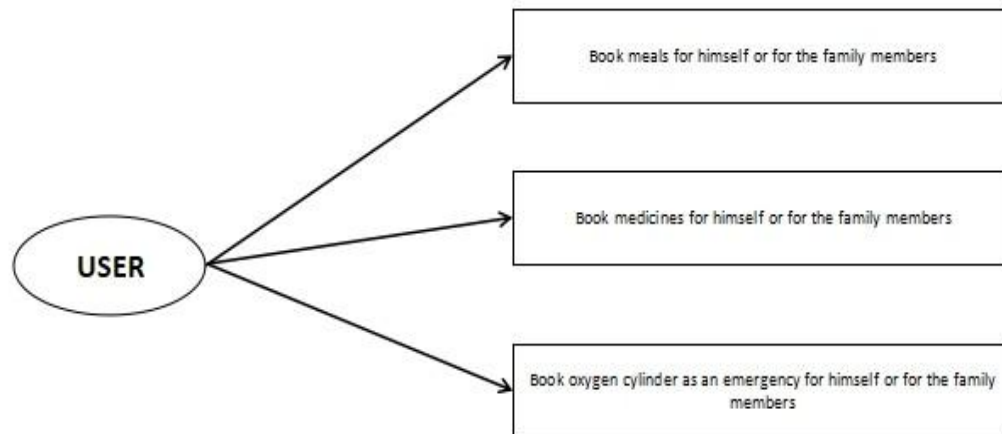

## 5.DATA FLOW DIAGRAM OF USER

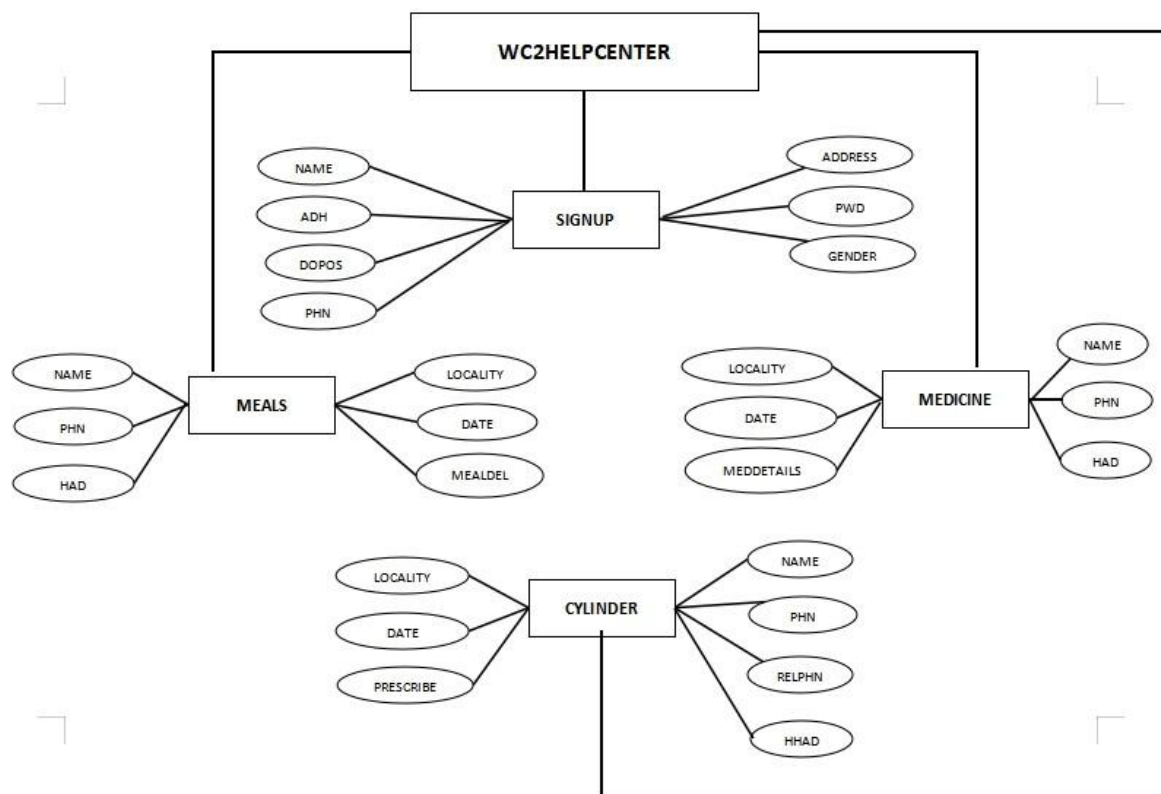

## DATA FLOW DIAGRAM OF USER

## 6.USE CASE DIAGRAM FOR USER

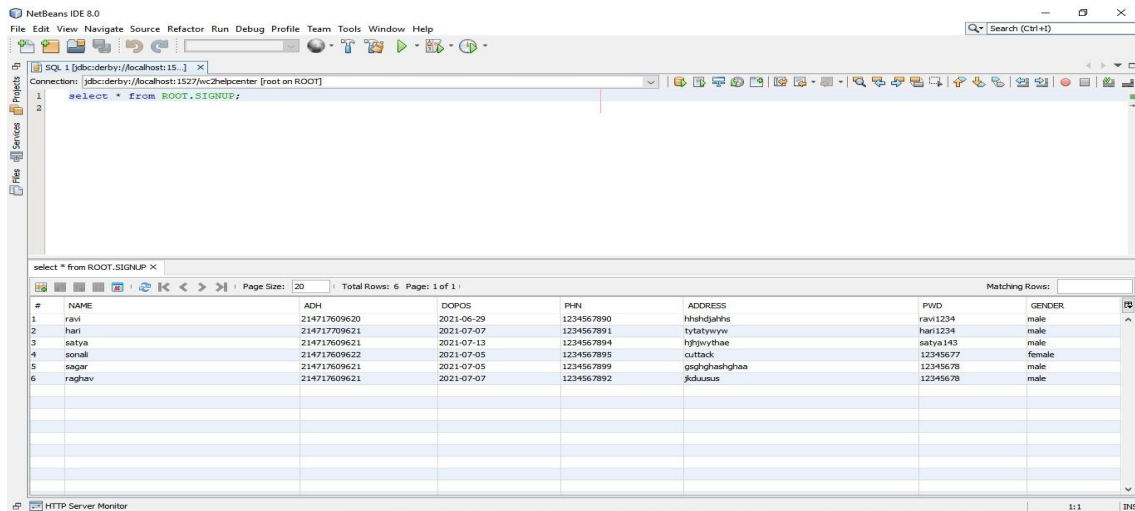

## 7.DATABASE ER DIAGRAM

## 4.2 TABLE DESIGN

## VARIOUS TABLES TO MAINTAIN RECORDS

## 6.BOOK MEALS(Book\_meals.html)

The Book Meal page provides the service to order food home without any delay. It has the option to order meal at two times, lunch and dinner.

The screenshot shows a web browser window with the address bar displaying a file path. The main content is a 'Book Meals' form overlay. The form has the following fields and options:

- Full Name:** A text input field with placeholder text 'Enter your name'.
- Phone Number:** A text input field with placeholder text 'Enter your Number'.
- Home/Apartment Address:** A text input field with placeholder text 'Enter your Address'.
- Locality\*:** A text input field with placeholder text 'Enter your Locality'.
- Date:** A date picker field showing 'dd-mm-yyyy'.
- Meal-Time:** Two radio button options: 'Lunch:-12:00pm-2:00pm' and 'Dinner:-7:00pm-9:00pm'.
- Book:** A blue button at the bottom of the form.

<h2>About Us</h2>

<p>

The coronavirus disease (COVID-19) pandemic has created a public health emergency with immediate and long-term economic consequences for children and their families. The effect of covid in developing countries like India has been drastic and humongous. Lack of ample health infrastructure has worsened the situation. The Government has been trying their best to control and nullify the circumstances and provide essential resources.

</p>

## **10. Database connectivity(DataConnect.java)**

```
import java.sql.*;
```

```
public class DataConnect {
```

```
    public static Connection condb()
```

```
    {
```

```
        Connection con=null;
```

```
        try {
```

```
        Class.forName("org.apache.derby.jdbc.ClientDriver");
```

```
        con=DriverManager.getConnection("jdbc:derby://localhost:1527/wc2helpcenter;create=true","root","root");
```

```
        } catch (Exception ex)
```

```
        {System.out.println(ex);
```

```
        }
```

```
        return con;
```

```
    }
```

```
}
```

## **5. SYSTEM TESTING**

The aim of system testing process was to determine all defects in our project. The program was subjected to a set of test inputs and various observations were made and based on these observations it will be decided whether the program behaves as expected or not. Our project went through two levels of testing i.e

1. Unit testing
2. Integration testing

### **5.1 UNIT TESTING**

Unit testing is undertaken when a module has been created and successfully reviewed. In order to test a single module we need to provide a complete environment i.e besides the module we would require

- The procedures belonging to other modules that the module under test calls
- Non local data structures that module accesses
- A procedure to call the functions on the module under test with appropriate parameters

Unit testing was done in each and every module that is described under module description of system implementation.

#### **1. Test for the admin module**

- Testing admin login form-This form is used for login of administrator of the system. In this we entered the user name and password, if both are correct administration page will open otherwise any of data is wrong it will get redirected back to the login page and ask for user name and password.
- Admin activity-After successful login admin can access the database to add, delete, update, search a user record and provide response to the users effectively.

## 2. Test for user module

- Test for user login form-This form is used for login of student.In this a user enter phone number and password,if all these are correct service page will open otherwise any of data is wrong it will redirected to the login page and ask again to entry the required data correctly.A user can set a new password if he/she has forgotten, by clicking the forgot password link in the login window.
- After successful login a user can access the services of meal booking,oxygen cylinder booking,medicine booking by filling all the required fields in the forms correctly.After accessing necessary services,now a user can signout from the service page and return to the home page by clicking the signout button.

## 5.2 **INTEGRATION TESTING**

In this type of testing we test various integration of the project module by providing the input .The primary objective is to test the module interfaces in order to ensure that no errors are occurring when one module invokes the other module.

## **CONCLUSION & FUTURE SCOPE**

The website to tend to help out people in this appalling situation .By this system we have tried to provide all three necessities in a single platform. Covid and its complications is dreadful and through this initiative we want to help in the cause in all possible manner. The medicines are well prescribed by Medical Professionals. The oxygen supplies are from trusted and authentic medium with no bootleg markets.

Enhancing the productivity, making up the lost time and power of technology to make the search of Covid resources much easier.

To outlook at the future, one would never want this dreadful situation continues. But with the Virus mutating,the situation will get much worse. The impact will be prolong .Keeping that in mind we would definitely try to make this initiative bigger and better that could help more masses. On hindsight more features can be added to this system such as booking of bed in hospitals or checking the availability of the beds in it. A feature of 24\*7 Covid helpline can also be looked at. These can make the project more useful , productive and efficient.
